

## Monthly News You Can Use

**"The first and primary goal of BTI is to deliver the foremost level of technical quality that can be delivered in Networking, Security and Telephony."**

## BTI Updates Vendor Compliance Process

The majority of the Fortune 1000 companies we work for subscribe to ISNetwork to prequalify and monitor compliance from their vendors. Accordingly, BTI has centralized its vendor compliance data within ISNetwork to streamline our reporting process.

Fortune 1000 clients across the country in electrical construction, logistics, food processing, and manufacturing have evaluated BTI through ISNetwork. We have made the following information available to our clients in an electronic format, which is available online 24 hours a day.

- Health, Safety, and Environmental Questionnaire
- Insurance Certificates
- OSHA Forms
- Experience Modification Rate (EMR) Letters
- Written Health, Safety, and Environmental Programs
- Training Information
- Reporting of Hours and Incidents by Month
- Cybersecurity

ISN's Review and Verification Services (RAVS) verifies and evaluates our health, safety, and procurement information to ensure regulatory and client specific requirements are met.

**We encourage you to contact ISN at (800) 976-1303 or visit their website: [www.isnetworld.com](http://www.isnetworld.com)**

## Speaking of viruses - BTI can inoculate you!

In 2019 we saw a sharp increase of cyber-attacks on IoT devices (internet of things) or the physical devices around you that connect to the internet, that are collecting and sharing data. Flaws in the software of smart devices, machinery, or employee owned devices are leaving companies vulnerable to hacking attacks. Additionally, if you do not maintain management of your connected devices, equipment, and software you create risk for your business. These IoT devices must be consistently managed and protected from threats to ensure business continuity. BTI can assess your network and all your connected devices and provide an outline of what's required to keep you safe from attacks.

**California privacy Laws - Does My Business Need to**

# Comply?

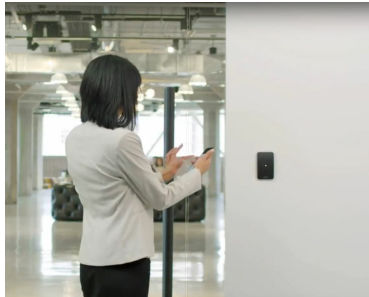

Read on - yes you do....

California's Consumer Privacy Act (CCPA) came into effect on January 1, 2020, but did you know that even if your business is located outside of California you can still be held liable? Any company with customers in California or providing nationwide or worldwide services to California must also adhere to these new standards. The CCPA holds companies directly responsible for "unauthorized access and exfiltration, theft, or disclosure as a

result of the business' violation of the duty to implement and maintain reasonable security procedures and practices." Ensure your company is following the right procedures and taking the proper precautions when it comes to how your data is stored and protected from outside and internal sources.

## Access Control Today

Access control solutions can greatly enhance your building security and even directly correlate with how well you maintain your cybersecurity by providing an audit trail and alerts for doors accessed or improperly accessed. Today, with the introduction of cloud-based access control, it's even easier to implement an electronic access solution and accommodate user requirements in safety and security. Businesses do not have to maintain access server equipment or software updates. Many of our access control solutions can integrate with the systems you

already have in place to provide additional management and reporting options. It's never been easier to provide building access management, lock down your facility, provide guest passes or allow remote entry and review all reports from anywhere. Call us and speak to a representative to learn more.
